Day 2 Assignment:

Q.1 Write a program to print your name with your surname.

Ans: `print("Your Name Your Surname")`

Q.2 Create three variables and print about you. (Name, age, and mobile number)

Ans :

```python
name = "ABC"
age = 25
mobile_no = "123-456-7890"

print("My name is", name)
print("I am", age, "years old")
print("My mobile number is", mobile_no)
```

Q.3 Write a python program to add two integers.

Ans :

```python
a=5
b=8
print("Addition is - ", a+b)
```

Q.4 Write a python program to change the type of data type.

```python
age = 10
print("Age is of type", type(age))

age = float(age)
print("Age is now of type", type(age))
```

Q.5 Write a python program to create a list data type and store at least 3 values, like name, age and number.

```python
my_list = ["ABC", 25, "123-456-7890"]
print(my_list)
```
